Final Project 2 Function description

validateForm

This function calls 3 functions internally to validate if fields are filled correctly. If there is no problem, and alert is shown to the user thanking him/her for the message.

validateMessage

This functions shows an alert if message length is less than 10 and returns false.

validateName

This functions makes sure name length is greater than 3. And the name does not contain digits. This is tested against a regex. If there is a problem, an alert is shown to the user and it returns false.

validateSubject

This function makes sure that subject line is not empty. If it is, an alert is shown to the user and returns falls.

There is one last global JQuery function which is called when document is ready. Inside it, if an element with id #downloadresume is clicked, it downloads my pdf resume.
